

## Technology Information for the Support Materials

The interactive items were designed to approximate the experience of Mathematics and English/Language Arts items through an online platform. They are for teacher and student use and align to Arizona's College and Career Ready Standards; actual assessment items will vary in content and user interface.

These items should be considered to be in a beta release format. As such items may be modified or removed at any time. Additionally, errors in functionality may be found within the items. If such an error is found, please report it to the Arizona Department of Education, Testing inbox at [testing@azed.gov](mailto:testing@azed.gov).

For best results the interactive items should be viewed in a web-browser running the latest version of Adobe Flash Player (download here <http://get.adobe.com/flashplayer/>). If this is not installed, an HTML5 version will run. However, this runs best on Chrome and Safari (mobile Safari for iPad) browsers with other browsers having limited or no functionality.

Below is a list of known issues.

- HTML 5 version runs slow/has long load times. This can be improved by installing and running Adobe Flash.
- Print functionality for results and free response items may not work on all browsers. A work around is to copy and paste free response items into a separate document or perform a screen capture of the final results.
